Total account value	-	-	\$50,900.00

Transactions and disclosures

September 5: ACH deposit of \$2,000.00. September 12: ACH withdrawal of \$500.00. September 25: BUEQ dividend of \$90.00 and CBND distribution of \$28.00, credited to cash. September 30: cash interest of \$2.00 and advisory fee of \$45.00. No security purchases or sales occurred during the period.

The market-value change includes unrealized price movements on holdings. The value increase is not a time-weighted or money-weighted investment return. ETF operating expenses are reflected in fund prices and are separate from the advisory fee. This statement is not a tax form. Securities can lose value; brokerage investments are not FDIC-insured.

Northstar Logistics, Inc.

Unaudited earnings summary | Quarter ended June 30, 2026

Issued July 28, 2026 | All dollar amounts in USD millions except per-share data

FICTIONAL SAMPLE - Created for a financial-agent demo. No real issuer or securities.

Condensed income statement

Metric	Q2 2026	Q2 2025
Revenue	\$120.0	\$100.0
Cost of revenue	(\$78.0)	(\$68.0)
Gross profit	\$42.0	\$32.0
Operating expenses	(\$24.0)	(\$22.0)
Operating income	\$18.0	\$10.0
Interest expense	(\$3.0)	(\$2.0)
Income before taxes	\$15.0	\$8.0
Income tax expense	(\$3.0)	(\$1.6)
Net income	\$12.0	\$6.4
Weighted-average diluted shares (millions)	20.0	20.0
Diluted earnings per share	\$0.60	\$0.32

Cash flow and selected balance-sheet data

Q2 2026 cash provided by operating activities: \$15.0 million. Capital expenditures: \$8.0 million. Free cash flow: \$7.0 million, defined here as operating cash flow less capital expenditures. Free cash flow is a non-GAAP measure; this calculation is its reconciliation to operating cash flow.

At June 30, 2026: cash \$25.0 million; total debt \$60.0 million; current assets \$50.0 million; current liabilities \$35.0 million. At December 31, 2025: cash \$22.0 million; total debt \$64.0 million. Current assets include cash, receivables and other short-term assets.

Management commentary and outlook

Revenue increased with additional shipment volume and pricing adjustments. Gross margin improved as fuel costs and network utilization improved. Management expects Q3 2026 revenue of \$125-\$130 million. This outlook is forward-looking and depends on demand, fuel costs and labor availability; actual results may differ. Net income and operating cash flow measure different things.

How the agent could explain them

Use pages 1 and 2 as source documents. This page provides example explanations and demo questions based only on their contents.

1. Investment account statement

Simple summary: Jordan ended September with \$50,900, up \$2,900 from the start. Of that increase, \$1,500 came from net new money deposited. The other \$1,400 came from market gains plus income, after the advisory fee. The account holds about 53.0% in the stock ETF, 39.3% in the bond ETF and 7.7% in cash.

Terms translated: A dividend is cash distributed by an investment. An unrealized gain means a holding rose in value but has not been sold. An ETF is a fund that trades like a stock. An advisory fee is the charge for account-management services.

What to avoid: Calling the \$2,900 increase an investment profit, or calculating a return percentage without accounting for when deposits and withdrawals happened. This document alone cannot determine the owner's tax bill or whether the holdings suit their goals.

Try asking: "Explain why the account increased, separating my deposits from investment results. What fees did I pay, and how is my money divided?"

2. Quarterly earnings report

Simple summary: Northstar sold \$120 million of services this quarter, 20% more than a year earlier. After all reported costs and taxes, it earned \$12 million, up 87.5%. Gross margin rose from 32% to 35%: it kept more of each revenue dollar after direct service costs. Net margin was 10%, compared with 6.4% a year earlier.

Cash and debt: Operations generated \$15 million of cash. After \$8 million of spending on long-lived assets, \$7 million remained under the company's free-cash-flow definition. Debt was \$60 million and cash was \$25 million, a \$35 million difference. Current assets were about 1.43 times current liabilities, but not all those assets are immediately spendable cash.

Terms translated: Revenue is sales before costs. Net income is accounting profit after expenses and taxes. Diluted EPS spreads profit across the share count including potential dilution. Capital expenditures buy or improve long-lived assets. Guidance is management's estimate, not a guaranteed result.

What to avoid: Treating profit as cash, treating guidance as fact, or concluding the stock is a good purchase from one quarter. The report does not provide a share price or enough information to value the company.

Try asking: "Explain this quarter as if I have never read an earnings report. How fast are sales and profit growing, why do profit and cash differ, and what uncertainties does management mention?"
